

Wiring the Speakers, Marquee Light and Power Bar.

See photos below for speakers, marquee light and power button.

See picture below for Power Bar and Amplifier. Power Bar will connect to AC power inlet and rocker switch.

How to install the monitor.

Attach the 2x 3" corner brackets to the LCD panel. Next use the 4x VESA screws and washers to attach the monitor. See the photo below for 2x brackets and 4x VESA screws. Next we will install monitor.

Place monitor inside the bartop cabinet. To get the proper placement use some wood or other hard object to get LCD monitor into correct height. I have a special jig to orientate the monitor.

Use Popsicle sticks to help level the monitor. I have 2x on the front of the LCD and 2 at the rear. Leave enough space in the front for the bezel and plexiglass.
